

Figure 1 is a line graph showing the relationship between the number of iterations (x-axis, 0 to 1000) and the value of the function (y-axis, 0 to 1.0) for different values of α . The legend indicates five series:

- $\alpha = \pi/3$ (blue line)
- $\alpha = \pi/4$ (orange line)
- $\alpha = \pi/6$ (green line)
- $\alpha = \pi/8$ (red line)
- $\alpha = \pi/10$ (purple line)

The graph shows that for a fixed number of iterations, the value of the function increases as α decreases. The lines for $\alpha = \pi/8$ and $\alpha = \pi/10$ are very close to each other and represent the highest values, while the line for $\alpha = \pi/3$ represents the lowest values.

alpha = $\pi/3$
alpha = $\pi/4$
alpha = $\pi/6$
alpha = $\pi/8$
alpha = $\pi/10$
